

### **Appendix 1A – Arlingclose Economic & Interest Rate Forecast – November 2024**

#### **Underlying assumptions:**

- As expected, the Bank of England Monetary Policy Committee (MPC) cut the Bank Rate to 4.75% in November in an 8-1 vote. However, the outlook for monetary policy has changed following the new government's fiscal plans, as delivered in the recent Budget.
- The Budget contained measures that will boost demand, in a constrained supply environment, while pushing up direct costs for employers. The short to medium-term inflationary effects of the Budget require a change to our Interest Rate Forecast.
- UK GDP recovered well in the first half of 2024 from technical recession, but underlying growth appears relatively subdued. However, the Budget will significantly boost government spending over the short-term, with few offsetting measures to subdue household demand, so GDP growth is likely to rise relatively.
- Private sector wage growth has eased to 4.8% yet remains high, while services inflation continues to hold above pre-pandemic levels. The increase in employers' national insurance contributions, minimum and public sector wage levels could have wide ranging impacts on private sector employment demand and costs, but the near-term impact will likely be inflationary as these additional costs get passed to consumers.
- Consumer Price Index (CPI) inflation was below the 2% target in September but will rise a little by year-end as energy price declines from the previous year fall out of the annual comparison. The Bank of England (BoE) estimates the Budget impact will see the CPI rate at 2.7% by the end of 2025 and remain over target in 2026, as opposed to the prior projection of inflation easing back to and then below target by this point.
- The MPC re-emphasised the gradual move to easing monetary policy, and we now believe the Budget measures have both reduced the pace of Bank Rate cuts and increased the low for this loosening cycle (although downside risks remain in the medium term).
- The increase in borrowing, rise in inflation and shallower path for Bank Rate projected by the Office for Budget Responsibility (OBR) raised gilt yields. The material changes in rate expectations mean that yields will be generally higher in the post-Budget world.
- US government yields have risen following Donald Trump's and Republican victories in the US elections. Trump has run on a platform of policies that appear inflationary, calling into question the extent of policy loosening required from the Federal Reserve (which was already uncertain given continued solid US growth data). Higher US yields could also support higher UK yields.

**Forecast:**

- In line with our forecast, Bank Rate was cut to 4.75% in November 2024.
- The MPC will continue to lower Bank Rate to reduce the restrictiveness of monetary policy, but more slowly and to a higher level. We see another rate cut in February 2025, followed by one cut per quarter, in line with the Monetary Policy Report publication, to a low of 3.75%.
- Long-term gilt yields have risen to reflect both UK and US economic, monetary, and fiscal policy expectations, and increases in bond supply. Volatility is likely to remain elevated as the market digests incoming data for clues around the impact of policy changes.
- This uncertainty may also necessitate more frequent changes to our forecast than has been the case recently.
- Upside risks to inflation over the next 12 months could limit the extent of monetary easing, but we see the risks as broadly balanced over the medium-term.
